DETAILED ACTION

This is a non-final Office Action for application number 10 737,048 BRACKET ASSEMBLY filed on 12/16/03. Claims are pending. This non-final Action is in response to the BPAI decision dated 9/24/08. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 4490576 to Bolante et al.

The patent to Bolante et al. teaches an assemblage having a an electrical connector (30) having a metal body (See Abstract) with a tubular projection having a push-through portion having a first diameter (smaller part of 32, See marked drawing below) and an engaging portion having a second diameter (larger part of 32, See drawing) larger than the first diameter; and a metal support (14) having a major part that is substantially rigid and includes an aperture formed by a plurality of deflectable spokes (62), which diverge away from the plane of the major part of the support, the aperture having a center opening with a third diameter greater than the first diameter and less than the second diameter, whereby the tubular projection push-through portion slides through the aperture and the spokes engage the second diameter of the engaging portion and mount the electrical connector with the support, wherein a stop (38) associated with the second diameter limits the amount of movement possible for the support.

Response to Arguments

The BPAI decision reversed the examiner's rejection of the claims, however, a new art rejection is made above after the discovery of the new art cited above.
